
fifthplay is launching home monitor onto the Dutch market

- **Distribution contract with Tech Data Nederland**
- **Professional camera surveillance - keep an eye on your home - wherever you are**

ANTWERP – UTRECHT, 24th April 2008 – With Home Monitor, fifthplay is launching its first specific service package onto the Dutch market: a residential gateway and a wireless IP camera show you, over the internet using any device, what is going on in and around your home, business or holiday home. fifthplay has signed an agreement with Tech Data Nederland for the distribution of Home Monitor in the Netherlands.

fifthplay is launching its first application onto the Dutch market: the 'Home Monitor', a security system with professional camera surveillance that shows you, over the internet, from anywhere, what is happening around a house, business or holiday home. It works using any device running an internet browser, such as a computer or smartphone. A movement detector system alerts the householder by e-mail or SMS in the event of movement on the premises.

The Home Monitor package comprises a wireless IP camera, a "residential gateway" and an annual subscription to fifthplay's home-security services. After installation and activating the personal access code and password, the consumer can see, over the internet, what is going on in and around the house, holiday home or business. And this can be done from anywhere, using any device running an internet browser – PC, TV, PDA, smartphone or touch screen optimised for internet. And it all works live and in colour. A movement-detection system alerts an absent householder by e-mail or SMS when movement is detected on the premises, and photos and video images are then stored. Home Monitor can connect up to nine cameras, available in a variety of models: indoor or outdoor, remote controllable, infrared, etc.

Keep an eye on your home – wherever you are

The application can also monitor occupants of the house, such as elderly people or children. If anything happens to children or elderly people at home alone, they can press a "panic button" that can be fitted anywhere in the house. This enables anyone in the house to send a direct alert signal. An SMS or e-mail is then sent to the subscriber, who can immediately check on the situation, telephone or go to the house.

Home Monitor also offers access to the fifthplay services platform, which in turn hosts all the other services. The "Home Monitor" can be installed in a mere 10 minutes thanks to a simple plug & play system. No prior computing knowledge is required.

Distribution via Tech Data

fifthplay has signed an agreement with Tech Data Nederland for the distribution of the Home Monitor onto the Dutch market. "fifthplay has decided not to develop its own logistics department, and to leave this task entirely in the hands of Tech Data. By avoiding investing in a logistics structure, we can concentrate on our "go-to-market" strategy and retailer

support. Moreover, for Tech Data, fifthplay is an interesting springboard into the domestic services market”, says Kris van Daele, fifthplay CCO.

The company’s constant aim is to provide a range of products that offers added value and is forward-looking. Given fifthplay’s latest strategic development and Tech Data’s ambitions, this exclusive contract with fifthplay is a logical step. By combining fifthplay’s products and services and the full range offered by of Tech Data, we are preparing the retailer for tomorrow,” concludes Erwin Berkhuisen, Country Manager at Tech Data Nederland.
